The energy efficient LED lights provide a natural and bright lighting that illuminates the hob perfectly. It means you can always see what you are cooking.

The sensor turns the hood LED light on automatically when it detects any movement at any time of the day or the night, as long as this feature is activated.

This part ensures the filtered air to return back in to the cooker hood. The valve only opens one direction. It allows air to flow from the kitchen to the outside and prevents cold air from flowing inward.
